

Amendments to the Claims

The listing of claims replaces all prior versions, and listings, of claims in the application:

Listing of claims

1. (currently amended) A software product for a computer system to configure a transaction for a user operating a web browser wherein the transaction is used for automated testing of an Internet server system, the software product comprising:
 - transaction configuration instructions configured to direct a processor functionally distinct from the web browser to generate and transfer Hypertext Markup Language (HTML) pages without cookies to the web browser and to configure the transaction for automated testing of the Internet server system in response to user inputs to the HTML pages, wherein the HTML pages include a user login page, a transaction selection page, a transaction record page, a transaction edit page, and a transaction play page;
 - page transition instructions configured to direct the processor to transition between the pages in response to the user inputs and to constrain the transition between the pages based on transition state rules;
 - proxy instructions for capturing HTML requests and responses that flow between the web browser and the Internet server system:
 - a storage media configured to store the page transition instructions and the transaction configuration instructions; and
 - wherein
 - the transaction record page allows the user to use the web browser to initiate a recording of web browser activity to generate the transaction,
 - the transaction edit page allows the user use the web browser to edit the transaction generated using the transaction record page, and
 - the transaction play page allows the user to use the web browser to view results of an automated test

using the transaction generated using the transaction
record page and edited using the transaction edit page.

2. (canceled)
3. (previously presented) The software product of claim 1 wherein the transaction selection page identifies the transaction, a transaction step, and a Uniform Resource Locator for the transaction step.
4. (previously presented) The software product of claim 1 wherein the transaction record page identifies the transaction, the transaction step, and the Uniform Resource Locator for the transaction step, and displays the web page of the Uniform Resource Locator.
5. (previously presented) The software product of claim 1 wherein the transaction edit page identifies the transaction, the transaction steps, the Uniform Resource Locators for each of the transaction steps, and test conditions for each of the Uniform Resource Locators.
6. (previously presented) The software product of claim 1 wherein the play page identifies the transaction, the transaction steps, and test results for each of the transaction steps.
7. (previously presented) The software product of claim 1 wherein the transaction is a purchase from the Internet server system.
8. (original) The software product of claim 1 wherein the transition state rules constrain the transition between the pages to transition from the transaction selection page to a transaction record page in response to a selection page record request, transition from the transaction record page to the transaction edit page in response to a record page stop request, transition from the transaction edit page to the transaction play page in response to an edit page play request, and transition from the transaction play page to the transaction edit page in response to a play page stop request.

9. (original) The software product of claim 8 wherein the transition state rules constrain the transition between the pages to start at the user login page and transition from the user login page to the transaction selection page in response to an authorized login and transition from the transaction selection page to the transaction edit page in response to a selection page edit request.
10. (original) The software product of claim 9 wherein the transition state rules constrain the transition between the pages to transition from the transaction selection page to a transaction play page in response to a selection page play request, transition from the transaction edit page to the transaction record page in response to an edit page record request, transition from the transaction edit page to the transaction selection page in response to an edit page stop request, transition from the transaction selection page to the user login page in response to a selection page stop request, and transition from the transaction play page to the transaction selection page in response to the play page stop request and the transition from the transaction selection page to the transaction play page.
11. (currently amended) A method of operating a computer system to configure a transaction for a user operating a web browser wherein the transaction is used for automated testing of an Internet server system, the method comprising:
 - generating Hypertext Markup Language (HTML) pages including a user login page, a transaction selection page, a transaction record page, a transaction edit page, and a transaction play page;
 - transferring the HTML pages to the web browser without transferring cookies and constraining transitions between the HTML pages that are transferred based on transition state rules;
 - receiving user inputs to the HTML pages and configuring the transaction for automated testing of the Internet server system in response to the user inputs and
 - wherein generating the Hypertext Markup Language (HTML) pages further comprises the following steps performed by a processor functionally distinct from the web browser:

initiating a recording by a proxy of web browser activity to
generate the transaction in response to the user input
through the web browser to the transaction record page;
editing the transaction generated using the transaction record
page in response to the user input through the web
browser to the transaction edit page; and
on the transaction play page, displaying results of an automated
test using the transaction generated using the transaction
record page and edited using the transaction edit page.

12. (canceled)
13. (previously presented) The method of claim 11 wherein the transaction selection page identifies the transaction, a transaction step, and a Uniform Resource Locator for the transaction step.
14. (previously presented) The method of claim 11 wherein the transaction record page identifies the transaction, the transaction step, and the Uniform Resource Locator for the transaction step, and displays the web page of the Uniform Resource Locator.
15. (previously presented) The method of claim 11 wherein the transaction edit page identifies the transaction, the transaction steps, the Uniform Resource Locators for each of the transaction steps, and test conditions for each of the Uniform Resource Locators.
16. (previously presented) The method of claim 11 wherein the play page identifies the transaction, the transaction steps, and test results for each of the transaction steps.
17. (previously presented) The method of claim 11 wherein the transaction is a purchase from the Internet server system.
18. (original) The method claim 11 wherein the transition state rules constrain the transition between the pages to transition from the transaction selectionpage to a

transaction record page in response to a selection page record request, transition from the transaction record page to the transaction edit page in response to a record page stop request, transition from the transaction edit page to the transaction play page in response to an edit page play request, and transition from the transaction play page to the transaction edit page in response to a play page stop request.

19. (original) The method of claim 18 wherein the transition state rules constrain the transition between the pages to start at the user login page and transition from the user login page to the transaction selection page in response to an authorized login and transition from the transaction selection page to the transaction edit page in response to a selection page edit request.
20. (original) The method of claim 19 wherein the transition state rules constrain the transition between the pages to transition from the transaction selection page to a transaction play page in response to a selection page play request, transition from the transaction edit page to the transaction record page in response to an edit page record request, transition from the transaction edit page to the transaction selection page in response to an edit page stop request, transition from the transaction selection page to the user login page in response to a selection page stop request, and transition from the transaction play page to the transaction selection page in response to the play page stop request and the transition from the transaction selection page to the transaction play page.
